EXPERIENCE

GOAT

Senior Software Engineer II — Jan 2022 – Aug 2026

- Responsible for building and releasing critical and highly crafted user experiences in the GOAT iOS app, serving hundreds of thousands of DAUs with a 4.9-star rating across 2M+ App Store reviews. Led extensive refactors of our core purchase funnel, including a completely redesigned search experience, PDP and Buy Bar.
- Served as iOS lead, coordinating across iOS, product, design, backend and QA. Authored design documents defining objectives, architecture and sequencing, and partnered with PMs to set and hit every project deadline.
- Helped move the mobile team to AI-assisted development: introduced our first AGENTS.md, worked with infra to enable @Claude in our GitHub org, and automated maintenance and library upgrades with agents running in GitHub Actions.

Senior Software Engineer I

- Led the codebase's move to Swift Concurrency and SwiftUI, setting the patterns for both and running demos and presentations to drive adoption.

Tavour

Senior Software Engineer — May 2020 – Sept 2021

- Lead of Tavour’s React Native mobile apps working to reshape the app with community and search features to reach new audiences.
- Owned integration of a major machine learning initiative that let users look up products by photo 10x faster, building the bridge between the React Native frontend and on-device Swift Core ML models.

Blue Bottle Coffee

Senior Software Engineer — Jul 2016 – May 2020

- Led the development of Blue Bottle’s flagship iOS order ahead application from the ground up, working on the conceptual development to nationwide launch for 70 cafes in 6 months.
- App generated $2.5M revenue and 500k orders in the first year, at a 35% daily conversion rate
- Retooled our engineering team to be mobile-focused, leading talks on iOS/Swift development and providing technical leadership.
- Built the app’s checkout and payment flows, along with integrating with the Square SDK for vaulting cards, processing transactions and supporting Apple Pay.

Software Engineer

- Built Blue Bottle’s coffee recommendation engine, the Coffee Match. Worked with the coffee team to classify coffees and built a scoring engine that matches customers with coffees fitting their taste profile.
- Focused on the payment infrastructure for our Rails e-commerce platform, implementing Apple Pay and PayPal into our checkout flows, with PayPal leading to a 20% increase in conversion.

Move Loot
Software Engineer Jul 2015 – May 2016

- Built customer-facing features for a national two-sided furniture marketplace and improved warehouse logistics flows in a Rails codebase.

PROJECTS

Crisis Tracker | crisistracker.org
Built and maintained the Crisis Tracker since 2013, a real-time crisis mapping application run by Invisible Children. The Crisis Tracker displays data from 75 early-warning HF radios in central Africa that broadcast news of attacks by armed groups and serves as a geospatial database and reporting tool used by conflict researchers to develop policy and advocacy recommendations.

Training Plan | trainingplan.app
A training log for endurance athletes: a SwiftUI iOS app backed by a Rails API.

Trail Editor | traileditor.app
An OpenStreetMap editor for improving mountain bike trail coverage, with line editing, lidar and aerial basemap layers, and OSM changeset management. Built with Vite and TypeScript.

SKILLS

iOS - Swift, SwiftUI, UIKit, Swift Concurrency, Xcode, Swift Testing, XCTest
Architecture - MVVM, dependency injection, protocol-oriented design
Platform - Apple Pay, APNs, SPM
Delivery - Xcode Cloud, GitHub Actions, feature flags, A/B testing, App Store releases
AI Tooling - Claude Code, agentic workflows, LLM APIs
Web/Backend - Ruby, Ruby on Rails, TypeScript, React, PostgreSQL, Cloudflare, Mapbox

EDUCATION

UNIVERSITY OF WASHINGTON | B.A., Political Science, focus in International Security, Class of 2015
