Senior iOS Engineer and project lead with 10+ years of experience building exceptional ecommerce applications from ideation to scale

EXPERIENCE

GOAT

Senior Software Engineer II — Jan 2022 – Aug 2026

- Responsible for building and releasing critical and highly crafted user experiences in the GOAT iOS app, with hundreds of thousands of DAUs and 2m+ (4.9 avg) reviews on the App Store. Led extensive refactors of our core purchase funnel, including a completely redesigned search experience, PDP and Buy Bar.
- Served as iOS lead for these projects, coordinating with other iOS developers, product managers, QA, backend and design. As lead I wrote the software design document outlining objectives, architecture and sequencing, and I worked closely with our PMs to define and meet all of our project deadlines.
- Contributed to adapting the mobile team to AI-assisted development. Introduced our first agents.md, worked with our infra team to enable @Claude within our Github workspace and worked on automating maintenance and library upgrades using agents in Github Actions.

Senior Software Engineer I

- Led the way in modernizing our codebase, building out features using async/await and SwiftUI and mentoring the rest of the team on these concepts through demos and presentations

Tavour

Senior Software Engineer — May 2020 – Sept 2021

- Lead of Tavour's React Native mobile apps working to reshape the app with community and search features to reach new audiences
- Led the integration of a major machine learning initiative, allowing users to use visual search to look up product information 10x faster. As part of this, worked extensively with bridging code between the React Native frontend and our Swift Core ML models

Blue Bottle Coffee

Senior Software Engineer — July 2016 – May 2020

- Led the development of Blue Bottle's flagship iOS order ahead application from the ground up, working on the conceptual development to nationwide launch for 70 cafes in 6 months
- App generated $2.5M revenue and 500k orders in the first year, at a 35% daily conversion rate
- Retooled our engineering team to be mobile-focused, leading talks on iOS/Swift development and providing technical leadership
- Built the app's checkout and payment flows, along with integrating with the Square SDK for vaulting cards, processing transactions and supporting Apple Pay

Software Engineer

- Built Blue Bottle's coffee recommendation engine, the Coffee Match. Worked with the coffee team to classify coffees and built a scoring engine that matches customers with coffees fitting their taste profile
- Focused on the payment infrastructure for our Rails e-commerce platform, implementing Apple Pay and PayPal into our checkout flows, with PayPal leading to a 20% increase in conversion

Move Loot
Software Engineer July 2015 – May 2016

- Worked across numerous domains in Move Loot's Rails codebase from building new customer-facing features for its national two-sided marketplace to improving warehouse logistics flows

PROJECTS

Crisis Tracker | crisistracker.org
Built and maintained the Crisis Tracker since 2013, a real-time crisis mapping application run by Invisible Children. The Crisis Tracker displays data from 75 early-warning HF radios in central Africa that broadcast news of attacks by armed groups in central Africa and serves as a geospatial database and reporting tool used by conflict researchers to develop policy and advocacy recommendations

Training Plan | trainingplan.app
Built a training log app for endurance athletes, a SwiftUI-based iOS app backed by a Rails API

Trail Editor | traileditor.app
Built an OpenStreetMap editor specifically for improving mountain bike trail coverage with line editing, lidar/aerial basemap layers and OSM changeset management using Vite/Typescript

SKILLS

iOS - Swift, SwiftUI, UIKit, Xcode, Swift Concurrency, (async/await, actors, Swift 6)
Architecture - MVVM, Dependency Injection, Protocol-oriented design
Platform - Apple Pay, APNs, SPM
Testing - Swift Testing, XCTest, Embrace crash and performance monitoring
Delivery - Xcode Cloud, Github Actions, feature flags, A/B Testing, App Store Release
AI Tooling - Claude Code, agentic workflows, LLM APIs (OpenRouter)
Web/Backend - Ruby on Rails, JS/Typescript, React, PostgreSQL, Cloudflare, MapLibre/Mapbox

EDUCATION

UNIVERSITY OF WASHINGTON | B.A., Political Science, focus in International Security, Class of 2015
